

```

#include <Wire.h>
#include <LiquidCrystal_I2C.h>

// Define the LCD I2C address (usually 0x27 or 0x3F)
LiquidCrystal_I2C lcd(0x27, 16, 2); // Change 0x27 if necessary

const char* scrollingText = "Opi, Dipu, Nobel, Musa "; // Add spaces to
clear the display
const int textLength = 16; // Length of the LCD display

void setup() {
    // Initialize the LCD
    lcd.begin(16, 2);
    lcd.backlight(); // Turn on the backlight (optional)

    // Print Group-06 on the first line
    lcd.setCursor(0, 0); // Set cursor to column 0, row 0
    lcd.print("Group-06");
}

void loop() {
    // Loop through the scrolling text to create a scrolling effect
    for (int position = 0; position < strlen(scrollingText) + textLength;
position++) {
        lcd.setCursor(0, 1); // Set cursor to the second row (row 1)

        // Display the part of the scrolling text that fits the display
        for (int i = 0; i < textLength; i++) {
            // Check if the character is within the bounds of the scrolling text
            if (i + position < strlen(scrollingText)) {
                lcd.print(scrollingText[i + position]); // Print the current
character
            } else {
                lcd.print(' '); // Print space if outside the bounds of the
scrolling text
            }
        }

        delay(300); // Adjust delay for speed of scrolling
    }
}

```
